## hpproved For Release 2004/0**ડિફોર્મિફોર્ફિફેફ**-00809A000500830171-8 COMPLICATION 25X1 - 2 at Khalmaryo the coal is mined on the auriace and is no 25X1 good so Varkuta coal. Also, there is coal at Xbanavay and in 1941 there was a plan to build a railroad from there to Khabarov. A veterinarian, a free man, told no that construction of thin read was stopped in the 25X1 4. 25X1 5. There was a mine at Koshim, 140 km from Koshwa on the Peckern-Yorkuta railroad. And every your geologists used to be sent into the Urale, 25X1 starting from Aber, to prospect for new fields. There would be 10 to 15 goologists, but they never had enough equipment and supplies to get much result. they found oil and radium along the Izlma river. Pechorn-Vorbuta Bailingd 25X1 25X1 The distance from Kozhva, on the Pochora rivor, to Vorkata is 486 km. 25X1 the type of locomotives, but the freight cars are either of box or half-car type and are mostly four-axle. There are a few twoanle care. The number of trains daily varied from four to 16, depending on the weather. Bridges, repair shops, loccootive depots, water towers, and other buildings are almost completely standardized in construction end equacity. The buildings are marly all wooden. The bridges are all made of reinforced concrets. The water supply all along the way is from gravity tenks. \_\_\_\_\_ those are heated internally, because they 25X1 are not insulated. They run a passenger train every other day. 25X1 The railroad station on the Pechana river is at Kozhva, a town of two thousand. On the third has there is a railroad bridge, reinforced concrete, between 1,000 and 1,200 naters long, and high enough for barges to pean under. On the eighth kn there is a wooden railroad station called Pachora. It has passenger writing accommodations, a locomotive depot, and repair shops, probably for minor repair work only. Pechora has seven or eight station tracks which are frequently loaded to capacity with coal trains going south. On the 66th km the railroad crosses the river Sanya on a reinforced concrete bridge about 300 m long. Before emproaching the bridge, there is a small station called Kaulavoy, with no incilities of any kind. On the 110th les there is a larger station. Kas-Yu. It has a locomotive depot, water supply, a number of barracks for employees and prisoners, but no repair facilities. One mile beyond this station a bridge 500 to 600 m long crosses the river Kas-Yu. On the 142nd km there is enother bridge from 400 to 500mlong over the river Kozhim. On the 145th km there is a station, Kozhim, which is of medium size and has five sidings and a water supply. On the 166th km there in a 200 to 250 mater bridge over the river Chernays. On the 190th km there is a medium-sized station called Inta, which has a unter supply. From Into there is a spur of 15 km northwest to a coal mining villege called Intlag. On the 191st by the railroad crosses the river Intal which is approximately 350 m wide. On the 222nd km there is a large station. Kochmen, with a large locomotive depot for five to mix locomotives. We also has a water supply and repair shops. There are six or seven midings in front of the station. The locomotive depot itself is about one km nouth of the station.

	They are all dairy farms and the principal products are butter and meat, which are sent to the cities. Eight km southwest from Medvethka, along the west bank,	
	is a large dairy farm called Skedrovashir. This dairy farm belongs to Into prisoner camp. Here they have about 800 ands and 300-400 hectares of cultivated areas. Eighteen km from Modveshka on the east bank is Konetabor, a village of about four houses, and here is located the administrative center of a few collective farms. Five km from Konetabor is Aranets, a little village of about 15 houses and the neerost place to the Urals. Russian geological expeditions usually stay here en route to the Urals. Seven kn from Aranets on the west bank is Respublika. This is the best crossing point ecross the factora river. Care must be used along here to avoid the Byleyn river, a left bank tributary. It is very swampy and horses can't go through it. Respublika is supposed to	
25X1	About five km south is located Danilovka, a village of about 35 houses, and about five km southeast is located Magnuma, About 21 km from Kemmuna is Faralka, and 12 km from Karalka is Voya, with about 800 people, all Russim mettlers. They were all exiled during the collectivization period of 1925-35. Most came from Voronezh and the Kuban region. They were not pricemers, but were controlled by the MVD and their return to Russia was prohibited. Host worked in a factory producing grindstones. The factory was a co-operative belonging by the rayon executive committee, Rayspolkern. There was also a collective farm of about 150 hectares of cultivated area with 200 coms and 40 horses about 6 km went of Voya. Petroleum test wells were sunk in 1934, but no oil was found. About 11 km from Voya is Soplymake. This was a fueling station for wood-burning river craft. About 13 km from Soplymake is Shehugor, About 25 houses are here. About 24 km from Shehugor, along the Shehugor river, is located micha-Blehevnik. This is a small fishing collective of about 10 homes. During the war people here refused to go to the ermy and ran away to the Urals, where they were arrested. About 70 km from Shehugor is Yedzhid-Kyrta. This is in the coal-mining territory.

Road	Transport
25X1 54,	
25X1	Overland transportation in summer was very hard the only possible routes were along river banks, since inland areas were swamp; however, travel along the rivers was hard because of many small tributaries which drained into the larger rivers. These were narrow and deep. In the spring floods made the tributaries into torrents. The only safe place to cross them was at their mouths. Farther up, the channels are narrow and deep, with steep walls. Semetimes these little rivers were only one, we, or three m deep,
25X1	It was the steepness of the banks that made them hard to cross.
25X1 55.	Mostly tractors. Fravel by horseback is possible, but it is difficult
25X1	because the snow is two or three m deep and clushy.
56.	
25X1	Caterpillar. www American tractors which were very 500d. used them to clean the roads. They were generally more durable than the Russian
25X1	tractors. In 1946 the American tractors were taken to Tayshet. At Whalmaryu tractors were used almost exclusively for construction because snow was a serious problem, too much for horses to cope with. One tractor did about as much work as 100 horses.
